

Enterprise Shipping System

Shipping

ShippingLIVE!® from WMSi, ensures that your shipments are accurately processed using your defined business rules. This makes sure that items are shipped at the best possible rate and or rate and time. All orders are processed using our one click “Rate Shopping Engine” that compares the best rates from all carriers, both parcel and LTL, to guarantee that the rate at which you are shipping is the best price available to you and eliminates human error in carrier selection.

ShippingLIVE!® can be accessed anywhere within your network, supports multiple warehouses, and can be accessed anywhere in the flow from order entry, shipping,, track and trace. Our *Reconciliation Module* allows you to verify “Level of Service” and actual cost vs billed cost. Additionally, ShippingLIVE! can automatically capture your actual shipping costs along with the amount you want charged to the customer (Invoice amount); which means ShippingLIVE! can handle discount or up-charge structures automatically.

ShippingLIVE!® Eliminates the need to manage multiple systems, like UPS, FedEx, USPS and LTL carriers and puts everything under one roof. ShippingLIVE! ® provides a cutting edge and robust Integration with almost all ERP systems. All shipping activities can be managed under one system, eliminating the need for multiple software packages, interfaces and hardware requirements. By using our integrated system, it will eliminate all the manual input required under non integrated methods, thus increasing efficiency and productivity.

ShippingLIVE!® Extends your shipping rules and policies to your Inbound Shipments. By taking advantage of the Rate Shopping and/or Configuration Engine within ShippingLIVE!, you can apply your discounts and desired shipping methods to your inbound shipments.

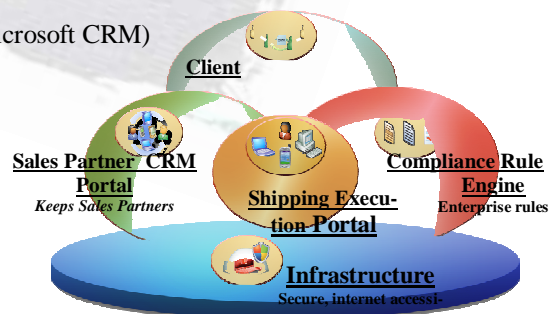

Our **In-Bound Portal** allows your suppliers to view their Purchase Orders, update the details of the shipment and if required, and Rate Shop on your rules and discounts; the best way to ship the order(s) to you.

ShippingLIVE!® generates all paper work; BOL, Manifests, etc at the Ship Station, and interfaces with most scales and conveyor systems.

Quick payback, continuing savings, increased efficiency.

Enterprise Performance with Lowest Cost of Ownership

- **Server Platform:** Windows 2003/2008 32 & 64 bit. Native ASP .NET 3.5. MS SQL 2005. Developed as a set of web services
